SIEMENS

Ingenuity for life

SINAMICS G120

The modular drive: space-saving, safe and rugged

SINAMICS G120

Space-saving, safe and rugged

Whether pumping, ventilating, compressing, moving or processing, the SINAMICS G120 is the universal drive to address the widest range of application requirements. It leverages its strengths in general machinery construction, as well as in the automotive, textile and packaging industries.

Its modular design and wide range of power ratings extending from 0.55 kW up to 250 kW (.75–400 hp) always ensures that you can configure the perfect drive for your application.

With SINAMICS G120, you will benefit from the wide range of possibilities that its modular design offers — including flexiblity and cost-savings, thanks to the need for reduced spare parts. All of this is complemented by its user-friendliness — from installation through maintenance.

The advantages of the SINAMICS drives family — an overview:

- Wide range of power ratings from 0.05kW ($^1/_6$ hp) to 85 MW
- Available in low-voltage, medium-voltage as well as DC versions
- High degree of flexibility and combinability
- Simple coupling to SIMATIC control systems and seamless automation integration through the Siemens Totally Integrated Automation Portal
- Higher-level, standard Safety Integrated concept
- Standard and unified functionality resulting from common hardware and software
- Common engineering for all drives — SIZER for engineering and STARTER / SINAMICS Startdrive for parameterization and commissioning

Mechanical system

- Modular design
- Innovative cooling concept for a higher degree of flexibility

Functionality

- Application-oriented control modules with expanded I/O quantity scope and wide range of funcionality
- Positioning capability (EPos)
- Comprehensive range of encoder interfaces
- Safety Integrated: STO, SS1, SBC, SLS, SDI, SSM
- Power Modules with low line harmonics
- Energy recovery into the line supply without requiring additional modules
- Integrated SIL3 on PM240-2 frame sizes D, E and F

High-power density

- Extremely compact design
- Significantly smaller than previous generation

Communication

- Integral part of Totally Integrated Automation Automation — with interfaces for PROFINET and PROFIBUS
- Supported profiles include PROFIdrive, PROFIsafe, PROFIenergy
- Coupling to third-party systems via USS / Modbus RTU, BacNet MS / TP, EtherNet / IP

SINAMICS drives

Power and performance for every application

The modular SINAMICS G120 is suitable for the applications highlighted below.

Purpose \ Performance*	Continuous motion			Discontinuous motion		
	 Basic	 Medium	 High	 Basic	 Medium	 High
 **Pumping / ventilating / compressing**	Centrifugal pumps Radial/axial fans Compressors	**Centrifugal pumps** **Radial/axial fans** **Compressors**	Excentric screw pumps	**Hydraulic pumps** **Dosing pumps**		Descaling pumps Hydraulic pumps
 **Moving**	Conveyor belts Roll conveyors Chain conveyors	**Conveyor belts** **Roller conveyors** **Chain conveyors** **Vertical material handling** **Elevators/escalators** **Gantry cranes** **Marine drives** **Cable railways**	Elevators Container cranes Mine hoists Open-cast mine excavators Test stands	**Accelerating conveyors** **Rack feeders**	Accelerating conveyors Rack feeders Crosscutters Roll changers	Storage and retrieval machines Robotics Pick-and-place Rotary indexing machines Crosscutters Roll feeds Engaging/ disengaging function
 **Processing**	Mills Mixers Kneaders Crushers Agitators Centrifuges	**Mills** **Mixers** **Kneaders** **Crushers** **Agitators** **Centrifuges** **Extruders** **Rotary furnaces**	Extruders Winders / unwinders Leading / following drives Calenders Main press drives Printing machines	**Tubular bagging machines** **Single-axis motion control such as:** •**Positioning profiles** •**Path profiles**		Servo presses Rolling mill drives Multi-axis motion control such as: •Multi-axis positioning •Cam discs •Interpolations
 **Machining**	Main drives for Turning Milling Drilling	Main drives for Drilling Sawing	Main drives for Turning Milling Drilling Gear cutting Grinding	Axis drives for Turning Milling Drilling	Axis drives for Drilling Sawing	Axis drives for Turning Milling Drilling Laser machining Gear cutting Grinding Nibbling and punching

*) Requirements placed on the torque accuracy / speed accuracy / positioning accuracy / axis coordination / functionality

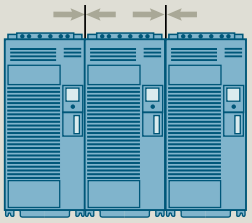
Low-voltage AC			DC-voltage DC	Medium-voltage AC
Basic performance	General performance	High-performance	DC applications	For applications with high power ratings
				V-series	G-series	S-series	DCM	Medium-voltage series
0.05–30 kW	0.37–6,600 kW	0.55–5,700 kW	6 kW–30 MW	0.15–85 MW
When it comes to the hardware as well as the functionality, SINAMICS V drives concentrate on the essentials. This results in a high degree of ruggedness with low associated investment costs.	The functionality of SINAMICS G drives makes them the perfect choice when addressing basic and medium requirements relating to the control dynamic performance.	SINAMICS S drives are predestined for demanding single-axis and multi-axis applications in plant and machinery construction — as well as for the widest range of motion control tasks.	In addition to the highest power ratings, SINAMICS DC drives also offer the maximum degree of availability.	Our seamless and integrated range — which is unique worldwide — encompasses every dynamic response and performance level in voltage classes 2.3 to 11 kV.

Space-saving

The well-conceived design and innovative technology make SINAMICS G120 especially compact.

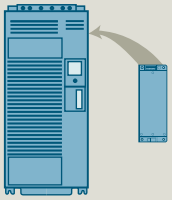
Side-by-side mounting

Cost reduction by saving space in the control cabinet



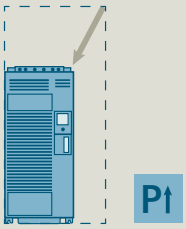
Same housing geometry for all voltages with and without filter A

Space-saving as a result of the same frame size with integrated filter



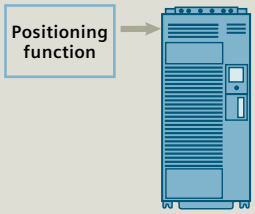
Higher power density

Space-saving as a result of a higher power rating in a smaller space



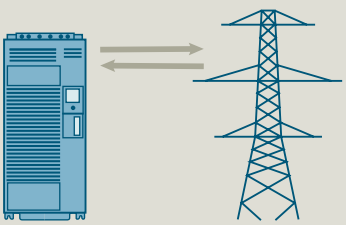
Integrated basic positioning functionality

Modules can be eliminated, such as additional positioning modules, encoder interfaces, etc.



Integrated energy recovery (Efficient Infeed Technology)

With the PM250, excess energy can be directly regenerated into the line supply



SINAMICS G120 family — frame sizes A, B, C, D, E and F

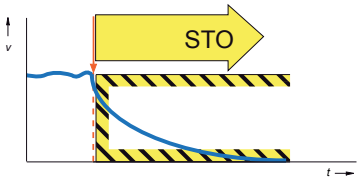
FSF	350	634 / 934	316

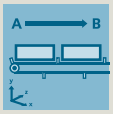
Safe

Safety functions in SINAMICS G120[1)]

Safe Torque Off (STO)

- Protects against inadvertent drive starting
- The drive is safely switched into a no-torque condition



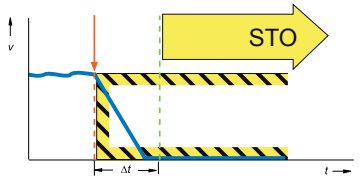


Conveyor belt

e.g. baggage handling / packet transport, feeding, removing

Safe Stop 1 (SS1)

- The drive is quickly stopped and safely monitored, especially for high moments of inertia

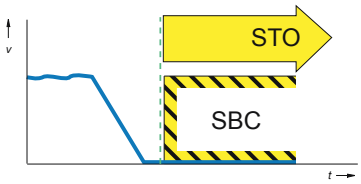


Saws

e.g. saws, unwinders, extruders, centrifuges, storage / retrieval machines

Safe Brake Control (SBC) with CU250S-2

- Safe control of holding brakes that are active in the no-current state
- Prevents sagging of suspended / pulling loads

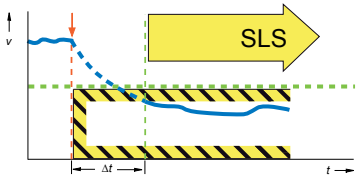


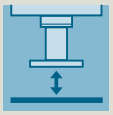
Crane

e.g. cranes, winders

Safely Limited Speed (SLS)

- Reduction and continuous monitoring of the drive speed to directly work at the machine while operational



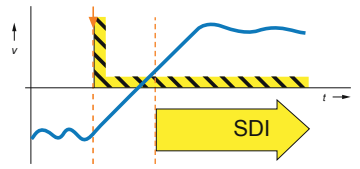


Press

e.g. presses, punches, winders, conveyor belts, grinding machines

Safe Direction (SDI)

- The function ensures that the drive can only rotate in the selected direction

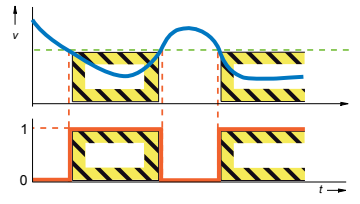


Loading gantry

e.g. storage and retrieval machines, presses, unwinders

Safe Speed Monitoring (SSM)

- The function provides a safe output signal, if the drive has fallen below the specified velocity limit



Milling tool

e.g. grinding machines, conveyor lines, drills, milling machines, packaging machines

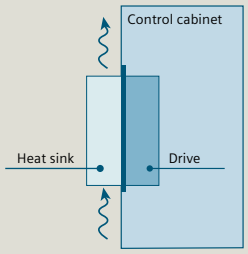
[1)] SINAMICS G120 safety functions can be implemented without encoder.

Flexible

SINAMICS G120 is the reliable system for a variety of applications.

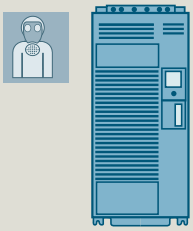
Push-through versions

- Lower temperature rise in the control cabinet
- Flexible control cabinet configurations



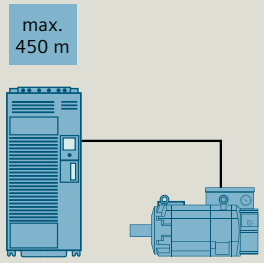
Components resistant to aggressive gases and coated modules

- Compliance with environmental class 3C2 (3C3 with SIPLUS) for frames A, B, C
- 3C3 is standard for frames D, E, F



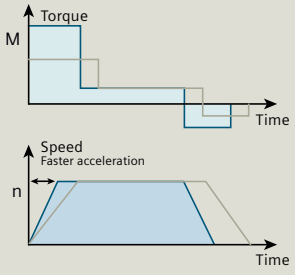
Optimized power module design

- Longer motor cables are possible:
  shielded: 300m (984 ft.)
  unshielded: 450 m (1485 ft.)
- Eliminates the need for input line and output reactor for frames D, E, F as a result of the integrated DC link choke
- Insensitive to line fluctuations



Closed-loop control

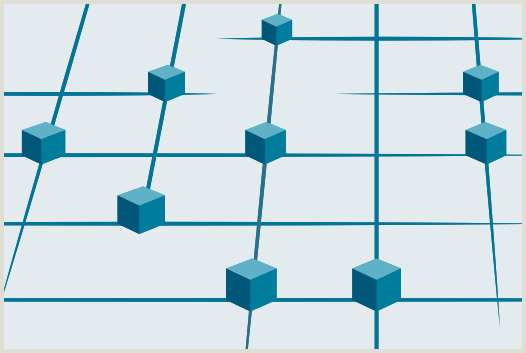
- Rugged open-loop and closed-loop control response for drives with low dynamic requirements — as well as for demanding drives with speed and torque control



Integrated, intelligent and innovative

With SINAMICS G120, we implement a holistic approach for automation and drive technology that paves the way for improved production. We can offer you everything to help you efficiently work with our innovative products and solutions — and create the pre-conditions so that these devices can be seamlessly integrated into the automation environment.

Networked with the automation — Totally Integrated Automation



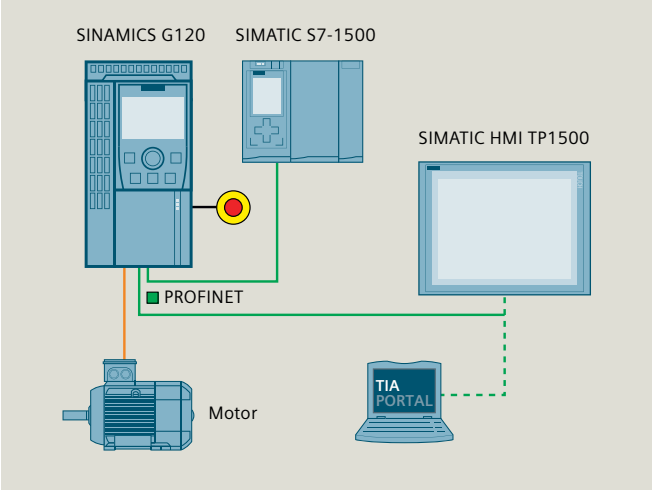
Totally Integrated Automation
Efficient interoperation of every automation component

Using the Totally Integrated Automation Portal (TIA Portal), our innovative engineering framework for all automation tasks, SINAMICS drives can be simply and efficiently integrated into any automation environment — using the SINAMICS Startdrive commissioning software, an integral component of the TIA Portal. This simplifies engineering, commissioning and diagnostics.

TIA Portal is the core of Totally Integrated Automation. The open system architecture covers the complete production process — and means that every automation component efficiently interacts with each another. This is achieved through consistent data management, global standards and unified hardware and software interfaces.

PROFINET — the leading Ethernet standard for industry

- PROFINET plays a central role within the scope of Totally Integrated Automation.
- The open Ethernet standard stands for fast and secure data exchange between all of the company hierarchic levels.
- Its flexibility, efficiency and performance create the optimum pre-condition for sustainably increasing productivity — and more competitiveness.

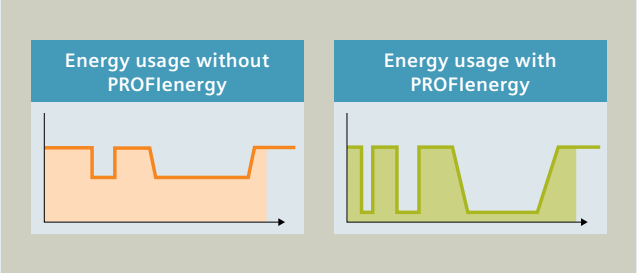


A systematic approach to higher energy efficiency

UP TO 65% ENERGY SAVING POTENTIAL

Our drives save energy through focused application-specific speed control as well as recovering braking energy up to 65% energy. Integrated energy-saving functions minimize your power costs even more.

With Efficient Infeed Technology, we offer an innovative feature, which also means that compact drives are capable of energy recovery.



SINAMICS G120 with PROFINET interface supports PROFIenergy. With the PROFINET-based profile, loads can be shut-down independent of the manufacturer and device in non-operational periods — in a coordinated fashion and centrally-controlled.

Additional energy-saving functions

- ECO mode / flux reduction reduces motor currents in the partial load range
- Hibernation mode — the drive is automatically switched on and switched off depending upon the process requirements
- Display of the electrical energy used
- Cascade — drives are switched on and switched off in stages depending upon the process requirement

Ready for SIMATIC Energy Suite

SIMATIC Energy Suite as integrated option for the TIA Portal efficiently links energy management with the automation, therefore making energy usage transparent in your production environment.

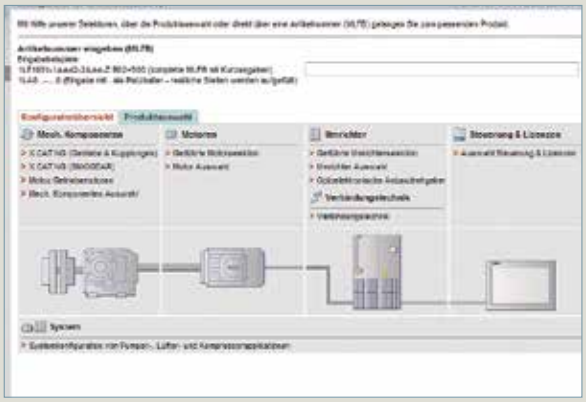
Engineering costs have been significantly reduced as it is now simpler to engineer components that measure energy, e.g. the SINAMICS G-series.

Thanks to the standardized connection to higher-level energy management systems or Cloud-based services, you can seamlessly extend the energy data acquired to create an energy management system across locations and facilities.

You can find additional information about the SIMATIC Energy Suite at www.siemens.com/energysuite

Powerful software tools — support when selecting, commissioning and operating

The SINAMICS G120 is not only easy to configure, it already offers a high degree of operator-friendliness during commissioning. Standard software tools make this possible.

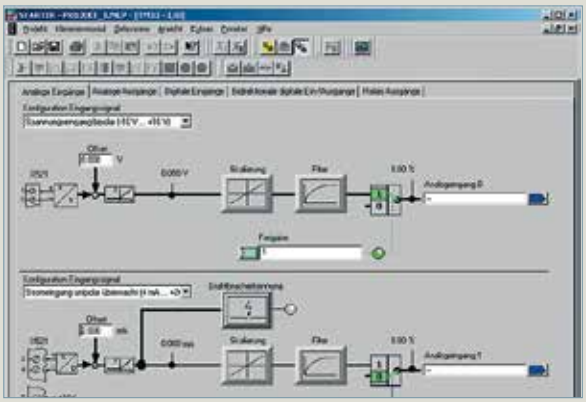


DT Configurator

- Fast product selection and ordering

SIZER

- Efficient engineering of a complete drive system



STARTER / SINAMICS Startdrive

- Configuration and commissioning in the Totally Integrated Automation (TIA) Portal

Intelligent Operator Panel and Basic Operator Panel — intuitive operation and monitoring

Two different operator panels are available for simple and efficient operation including monitoring of the SINAMICS G120 drive.

SINAMICS IOP-2
14 interface languages available

SINAMICS BOP

	IOP-2 (Intelligent Operator Panel)	BOP-2 (Basic Operator Panel)
Simple commissioning	■ SINAMICS G drives and the associated standard applications can be simply commissioned using wizards ■ Cloning function for fast series commissioning of the drives	■ Good overview as parameters and parameter values are simultaneously displayed
Operator control and visualization	■ New design — membrane keypad with central sensor control panel ■ Graphic display of status values, e.g. pressure and flow in bar-type diagrams ■ Simple, individualized local drive operation (start / stop, setpoint input, direction of rotation change) ■ Application-specific scenarios can be easily implemented, e.g. operating concepts with additional external operating devices	■ 2-line display for up to two process values with text ■ Status display of pre-defined units
Diagnostics	■ Fast diagnostics using local plain text display ■ Integrated plain text help function for local display and to remove fault messages	■ Diagnostics with menu prompting with 7-segment display
Can be flexibly used and open for expansions	■ Can be mounted directly on the Control Unit, installed in the door or as handheld terminal (depends on the drive-type) ■ 14 interface languages are available ■ IOP-2 device design, open for future expanded functionality (e.g. device functions, wizards, languages) ■ Can be simply upgraded to a new function release via the USB port	■ Can be mounted directly on the Control Unit or installed in the door (depends on the drive-type)

SINAMICS G120 — user-friendliness through modularity

Flexible combinations, high degree of operator-friendliness and standard software make the SINAMICS G120 a user-friendly solution right from the start.

Modularity offers you many advantages —

- Parts can be simply selected
- Lower costs and parts can be quickly replaced when service is required
- Fewer parts have to be stocked
- Can be simply expanded
- High reliability through integrated communication

SINAMICS G120
simply select —

1 2 3

SINAMICS selector app

Using this app, you can compile the order numbers for your SINAMICS G120 drive. It will guide you quickly and easily through the correct order numbers (MLFBs).

This is how it works

- Select SINAMICS frequency drives
- Select the rated power and device options
- Select accessories

You will be able to save and send your selection via e-mail. The pre-selection serves as the basis for an order specification with your distributor / Siemens.

Scan this QR-code to download the app free-of-charge

1

The choice is yours

You can select between two power modules* depending upon your particular requirements.

Standard braking response with braking chopper	Innovative braking response with energy recovery
PM240 / PM240-2 power modules	PM250 power modules
The PM240/ PM240-2 power modules are ideal for standard applications in general machinery construction.	The PM250 power module is ideal for applications requiring energy recovery.

2

Select your control unit

CU230P-2 control unit	CU240E-2 control unit	CU250S-2 control unit
The CU230P-2 control unit is specifically designed for pump, fan and compressor applications	The CU240E-2 is ideal for a multitude of applications in general machine building (e.g. mixers, agitators)	The CU250S-2 is ideal for high-quality applications (e.g. extruders, centrifuges)

3

Select the optional components

Additional components are available depending upon your particular requirements, for example, an operator panel (IOP-2 or BOP-2) or a blanking cover.

Your SINAMICS G120 drive has now been configured

**Detailed information about the PM230 power module is provided in SINAMICS G120P documentation. Detailed information on products and options is provided in the current Catalog D31 in Chapter "SINAMICS G120 standard inverters" or in the Siemens Industry Mall (iMall).*

PM240 / PM240-2 power modules

What power is required? (LO = Low Overload; HO = High Overload) *Definition HO/LO see p.22*	Is a filtered device of Class A required?	Are additional external line filters required (for example to maintain s
PM240/PM240-2 Power Modules have an integrated braking chopper and are suitable for many applications in general machine building.	The integrated EMC filter (Class A filter) is required to maintain the cable-conducted interference voltages and the radiated disturbances for installations in compliance with EN 61800-3 Category C2.	The external EMC filter (Class B filter) is also used to maintain cable-conducted interference voltages for installations according to EN 61800-3 Category C1. An unfiltered PM240-2 must be selected when using a Class B filter.

specific EMC values)?	Is a braking resistor required as a result of the application?	Should an output filter be used, for instance to be able to use long motor cables? [5]	Is a shield plate required for the power module?
Line reactors: to smooth voltage peaks, buffer commutation dips and reduce the effects of harmonics on the drive and line supply.	Excess energy in the DC link is dissipated using a braking resistor. Frame sizes FSA to FSF already include an integrated braking chopper (electronic switch).	Output reactors reduce the voltage stress on the motor winding. The cable lengths between the drive and motor can be extended.	The shield connection kit simplifies connecting the shields of supply and control cables, offers mechanical strain relief and guarantees an optimum EMC behavior.

[3] An unfiltered power module is required to use the external Class B filter

tific EMC values)?	Is a braking resistor required as a result of the application?	Should an output filter be used, for example, in order to be able to use longer motor cables?		Is a shield plate required for the power module?
Line reactors: to smooth voltage peaks, buffer commutation dips and reduce the effects of harmonics on the drive and line supply.	Excess energy in the DC link is dissipated using a braking resistor. Frame sizes FSA to FSF already include an integrated braking chopper (electronic switch).	Output reactors reduce the voltage stress on the motor winding. The cable lengths between the drive and motor can be extended.	The du/dt filter plus Voltage Peak Limiter limits the voltage rate of rise and typical voltage peaks	The shield connection kit simplifies connecting the shields of supply and control cables, offers mechanical strain relief and guarantees an optimum EMC behavior.
Line reactor	**Braking resistors (part number)**	**Output reactor**	**du/dt filter plus VPL (part number)**	**Shield plate for the power modules**

tific EMC values)?	Is a braking resistor required as a result of the application?	Should an output filter be used, for example, in order to be able to use longer motor cables?		Is a shield plate required for the Power Module?
In conjunction with the PM250, a line reactor is not required, and it is also not permissible that one is used.	The PM250 is capable of energy recovery. A braking resistor is not used, and it is also not permissible that one is used.	Output reactors reduce the voltage stress on the motor winding. The cable lengths between the drive and motor can be extended.	Sine-wave filters limit the voltage rate of rise and the capacitive recharging currents. An output reactor is not required.	The shield connection kit simplifies connecting the shields of supply and control cables, offers mechanical strain relief and guarantees an optimum EMC behavior.
	PM250 with energy recovery. As a result, it is not permissible that a braking resistor is used.	**Sub-chassis output reactor (part number)**	**Sine-wave filter FSC subchassis, from FSD, side-mounted (part number)**	**Shield plate for the power modules (part number)**

Conformance with standards	UL, cUL, CE, C-Tick, SEMI F47		UL, cUL, CE, C-Tick	
CE marking	According to the Low-Voltage Directive 2006/95/EC			
Electrical information				
Line frequency	47 ... 63 Hz			
Low Overload	Generally used for applications demanding a low level of dynamic performance (continuous operation), square-law torque characteristic with low breakaway torque and low-speed precision. For example: centrifugal pumps, radial/axial fans, reciprocating blowers, radial compressors, vacuum pumps, agitators, ...			
Overload capability (for Low Overload)	150% for 3 seconds: 110% for 57 seconds			
High Overload	Generally used for applications demanding a higher dynamic performance (cyclic duty), as well as constant torque characteristics with a high breakaway torque. For example: conveyor belts, geared pumps, excentric worm pumps, mills, mixers, crushers, vertical conveying equipment, centrifuges, ...			
Overload capability (for High Overload)	200% for 3 seconds: 150% for 57 seconds			
Overload capability (LO/HO)	When using the overload capability, the continuous output current is not reduced			
Output frequency	0 ... 550 Hz (control modes V/f and FCC), 200 Hz SLVC			
Pulse frequency	4 kHz (standard) or 4 ... 16 kHz (derating)		4 kHz (standard) or 4 kHz ... 16 kHz (derating) FSF: 4 kHz (standard) or 4 kHz ... 8 kHz (derating)	
Functions				
Brake functions	Dynamic braking, DC braking, motor holding brake, compound brake		Energy recovery in regenerative operation	
Motors that can be connected	Three-phase induction motors and synchronous reluctance motors[2]			
Protection functions	Under-voltage, over-voltage, over-modulation/overload. Ground fault, short circuit, stall protection, motor blocked protection, motor over-temperature, drive over-temperature, parameter inter-locking			

[1] *with line reactor*

[2] *depending upon the respective Control Unit*

Control units	CU230P-2	CU240E-2	CU250S-2
	Optimized for pumps, fans, compressors	Optimized for general applications in machine building, such as conveyor belts and mixers	For demanding applications in the standard drives domain, for example extruders, centrifuges
Architecture	Application-optimized number of I/O	Standard number of I/O, integrated safety technology	Higher number of I/O, integrated safety technology and basic positioning function
Mounting dimensions [WxHxD]	73 x 199 x 65.5 mm (2.9 x 7.8 x 2.6 in.)	73 x 199 x 46 mm (2.9 x 7.8 x 1.8 in.)	73 x 199 x 46 mm (2.9 x 7.8 x 1.8 in.)
Communication functions			
PROFINET	CU230P-2 PN	CU240E-2 PN, CU240E-2 PN-F	CU250S-2 PN
PROFIBUS DP	CU230P-2 DP	CU240E-2 DP, CU240E-2 DP-F	CU250S-2 DP
EtherNet/IP	CU230P-2 PN	CU240E-2 PN, CU240E-2 PN-F	CU250S-2 PN
Modbus RTU and USS	CU230P-2 HVAC	CU240E-2, CU240E-2 F	CU250S-2
BACnet MS/TP	CU230P-2 HVAC	–	–
USB interface	1	1	1
Safety functions according to Category 3 of EN 954-1 or acc. to SIL2 of IEC 61508			
Integrated safety function: STO	–	CU240E-2, DP, PN	–
STO, SS1, SLS, SDI, SSM	–	CU240E-2 F, DP-F, PN-F	–
STO, SBC, SS1	–	–	CU250S-2, DP, PN
STO, SBC, SS1, SLS, SSM, SDI	–	–	CU250S-2, DP, PN (SLS, SSM, SDI with safety license)
Electrical information			
Supply voltage	24V DC (via power modules or externally)		
Digital inputs	6	6	11
Digital inputs failsafe	–	CU240E-2, CU240E-2 DP: 1 CU240E-2 DP-F: 3	3
Analog inputs, parameterizable	2 x (–10 to +10V, 0/4 to 20 mA) 1 x (0/4 to 20 mA, Pt1000/LG-Ni1000) 1 x (Pt1000/LG-Ni1000)	2 x (–10 to +10V, 0/4 to 20 mA)	2 x (–10 to +10V, 0/4 to 20 mA)
Digital outputs	2 x (relay NO/NC, 250V AC, 2 A, 30V DC, 5 A)[1)] 1 x (relay NO, 30V DC, 0.5 A)	1 x (transistor, 30V DC, 0.5 A) 2 x (relay NO/NC, 30V DC, 0.5 A)	4 x (transistor, 30V DC, 0.5 A) can be optionally used as digital inputs 1 x relay: NO: 30V DC, 0.5 A 2 x relay: NO/NC: 30V DC, 0.5 A
Analog outputs	2 x (0 to 10V, 0/4 to 20 mA)	1 x (0 to 10V, 0/4 to 20 mA) 1 x (0 to 10V, 0 to 20 mA)	2 x (0 to 10V, 0/4 to 20 mA)
Functions			
Open-loop/closed-loop control techniques	V/f (linear, square law, free, FFC, ECO), field-oriented control of speed and torque without encoder		
			Field-oriented control of speed and torque with encoder
Setpoints	**Setpoint selection:** analog value, fixed setpoints (max. 16), motorized potentiometer, communication interface, PID controller for process quantities		
	Setpoint channel: minimum speed, maximum speed, ramp-function generator with rounding, 4 skip frequencies		
Protection	**Drives:** over-voltage and under-voltage, as well as phase failure, over-current protection, overload I2t, over-temperature of the control module and power unit, wire breakage of analog signals, evaluation of 3 external faults/alarms		
	Motor: temperature monitoring with and without temperature sensor, over-speed, locked rotor and stall protection		
	Drive: torque monitoring for dry running protection, belt monitoring		
	Communication: telegram failure, bus interruption		
	Fault message memory: buffer for 8 fault cases, each with 8 faults and fault value and time, buffer for 56 alarms with alarm value and instant in time		
Mechanical information			
Degree of protection	IP20		
Software			
STARTER, SIZER, DT Configurator, SINAMICS Startdrive	x		x	x
Accessories			
	IOP-2, BOP-2, shield connection kit, PC inverter connection kit 2, SINAMICS memory card (SD card)		

[1)] *For plants and systems corresponding to UL, the following applies: via terminals 18/20 (DO 0 NC) and 23/25 (DO 2 NC) max. 3A, 30V DC or 2A, 250V AC*

There’s more to it.
